

Automatically capture all fuel prices and other transactional data from any source for quick access.

CaptureRite is the front-end component of Axxis Software that allows instant downloads of time-sensitive data and eliminates manual collection of prices, transactions and allocations.

Market Challenge

For fuel companies, gathering business-critical data such as source pricing, contract information, supplier BOLs, freight invoices, credit card memos, allocations and EFTs is a challenging and labor-intensive task. Such data is also costly to retrieve electronically in an automatic or centralized way.

How We Help

Axxis CaptureRite provides a single tool for capturing all types of fuel data from a variety of electronic sources — email, FTPs, website and API — and transferring it automatically to a receiving application that translates, normalizes and archives the data for real-time use. CaptureRite streamlines the process of collecting consistent, electronic and machine-readable data and reduces overhead costs.

Benefits

- Capture scripts are continuously monitored and automatically updated to accommodate changes in layout, format and location by suppliers and data providers
- Complete audit trail provides a detailed account of all price and data capture activities
- Add-on module enables collection of all email formats, including text and CSV attachments, directed to a central inbox based on a schedule you set
- One-time license, independent of data volume and without separate transactions fees

Who We Help

- Retailers
- Wholesalers & Jobbers

Market Segments

- Rack
- Retail

Commodities

- Gasoline
- Diesel
- Biofuels
- Propane
- Jet/Av Gas
